Connecting to WebMaster/WIND/WebAlert via Direct Ethernet, Windows 10

From the Start, click on Settings:
Click on Network and Internet:

In Network & Internet, click Change adapter options:

Status

Network status

You're connected to the Internet
If you have a limited data plan, you can make this network a metered connection or change other properties.

Change connection properties

Show available networks

Change your network settings

Change adapter options
View network adapters and change connection settings.

Sharing options
For the networks you connect to, decide what you want to share.

Network troubleshooter
Diagnose and fix network problems.

View your network properties
The connection you’re looking for is Ethernet Unidentified network

Right click, and click Properties:
In the Properties screen, highlight Internet Protocol Version 4 (TCP/IPv4), and click Properties.

Select Use the following IP address

Change the IP address to one-off the controllers, ie if the controller is 10.0.100.29, make the computer’s 10.0.100.30. Subnet mask should be 255.255.254.0.
For best results, you should temporarily disable your WIFI.

Open your web browser (Google Chrome shown) and enter the controller's IP address in the address bar and then press the enter key. The WebMaster authentication screen appears as shown below:
Remember to re-enable the WiFi when you are finished with the direct ethernet connection.
