### TROUBLESHOOTING THE USB CONNECTION

#### Troubleshooting the USB connection

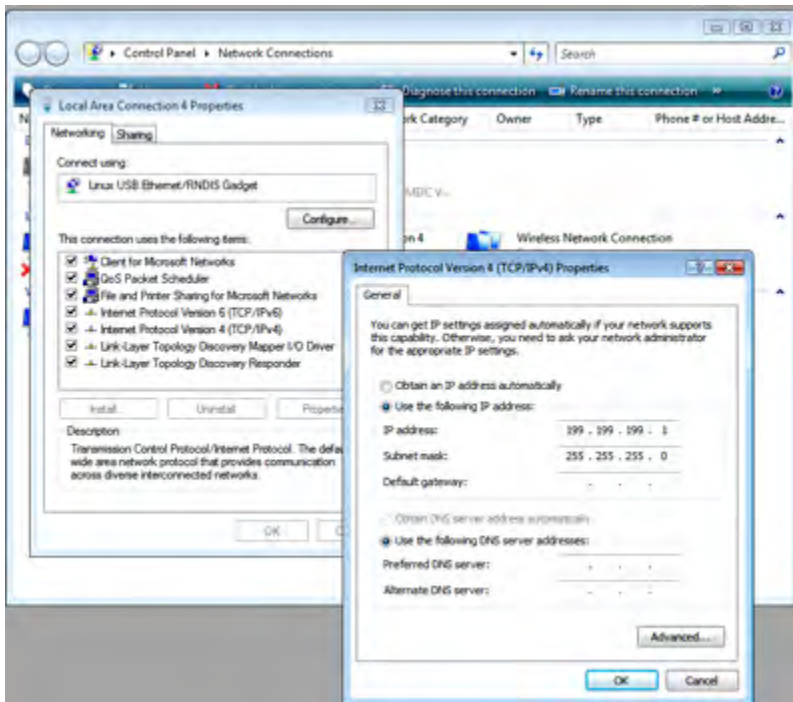

The problem: You connect to the Webmaster with your USB cable, open your browser, type in the IP address 199.199.199.2, and the **Login Page** doesn't load. What do you do?

1. First, when you plug the cable in, you should see "Device can perform faster on a USB 2.0 port...." message.

If you see this, then go to your Network Connections on your computer. Under "LAN or High Speed Connection", you should see Local Area Connection 2 (it may be Local Area Connection 3, or some other number). It should be connected, and the connection time moving. If you see this, then you're connected.

2. Right-click on Properties. Highlight TCP-IP (in Vista, it will be TCP-IP-v4), and click Properties. The IP address should be 199.199.199.1, and the subnet mask should be 255.255.255.0.

3. If you don't get the message "This device can perform faster", or if you don't see the Local Area Connection 2, then unplug your USB cable, wait 3 minutes, and plug back in.
4. If waiting 3 minutes and plugging the USB cable back in doesn't work, re-boot both computer and controller.
5. If this doesn't work, read the tips below:
