

W600/W900 USB Sticks

Recommended Manufacturers:

- Transcend
- SanDisk
- Samsung
- Kingston

Note: This is not to say other manufacturer's sticks won't work; these are the sticks users have had success with. For best results, avoid cheap, "giveaway" sticks.

USB Stick Size:

- 8 GB – best choice and our first recommendation.
- 16 GB – second alternative. There have been a few reported issues with this size stick.

Note: 32 GB or larger will not work at all as they are not supported on our controllers due to the USB library we use on them to detect and read a stick. The minimum stick size is 32 MB.

Formatting:

- FAT32 – this is the most reliable and is typically the default formatting of most all USB sticks.
